DENTAL CLEANING CONSENT FORM

A dental cleaning requires a general anesthetic. During this procedure, the teeth will be scaled to remove plaque and tartar, polished and receive a fluoride treatment. The gum tissue, mouth, and teeth are checked closely for sores, looseness, growths, etc. You will be contacted about appropriate treatment.

Like you, our greatest concern is for the well-being of your pet. A physical examination will be performed prior to sedating your pet. However, with a physical examination alone, underlying liver, kidney, heart or blood disorders may not be identified. Blood screening can help identify these disorders. Adjustments to the anesthetics used or postponing the procedure can be done to minimize further risk or damage. These tests are similar to what your own physician would run if you were to go under anesthesia. Testing is done here at the clinic so results are available before the sedation.

Blood screening is required at least 3 days prior to all anesthetic procedures. Please call the office to schedule your pet's pre-anesthetic blood screening.

ANTI-NAUSEA INJECTION:

All pets react differently to anesthetic. Sometimes nausea can occur after an anesthetic procedure. We offer an injection to prevent vomiting and possible aspiration. Please initial your choice below:

- YES, I do want my pet to receive this injection. Cost is based on pet's weight (call the office for pricing).
- NO, I do not want my pet to receive this injection.

RELEASE STATEMENT:

I understand that all sedation / anesthesia involves some risk to my pet. Westbrook Animal Hospital strives to minimize any risk yet problems do sometimes occur. I understand that I will assume all risks, and that Westbrook Animal Hospital will not be held liable in any manner or circumstance.

I have read and understand this statement.
